

BAT Lanes at a Glance

Business Access and Transit (BAT) lanes are curbside lanes designated for transit buses and vehicles making right-hand turns. They are designed to keep buses moving while still allowing drivers to access local businesses and side streets. BAT lanes are painted red.

How can BAT lanes help improve travel times?

Transit riders

- BAT lanes help buses maintain reliable service by reducing delays caused by general traffic.
- Dedicated bus lanes allow buses to travel more freely, improving the likelihood of on-time arrivals.
- Transit signal priority at select intersections improves efficiency by extending or adjusting green lights when a bus is approaching.

Drivers

- BAT lanes improve the flow of general traffic by moving buses out of regular travel lanes.
- Drivers can travel more smoothly without frequent bus stops slowing them down.
- Right turns are easier as BAT lanes offer better visibility and more space to turn at intersections and into driveways.

Reminders:

Bus Access Only

BAT Lanes are for bus travel only. Accessing businesses and making right turns are permitted from a BAT Lane.

Don't Travel in the BAT Lane

General traffic should not travel in BAT lanes, except for a short distance when making a right-hand turn onto a side street or into a business.

Don't Park in the BAT Lane

Parking is not allowed in BAT lanes at any time.

Turn into the Nearest Through Traffic Lane

When leaving a business or driveway, merge into the nearest through-traffic lane not into the BAT lane.

Use for Right Turns

BAT lanes improve visibility and space, making it easier for drivers to make right-hand turns.
